“Governor Cooper understands the difficulty faced by families relying on bottled water. The best solution would be for Duke to hook the families affected up to public water. In the meantime, the Secretaries of DEQ and DHHS have convened the Science Advisory Board to find a solution based on science – not politics - to address this issue so families don’t have to second-guess the safety of their drinking water.”

Subject: Re: Governor Cooper Urges EPA to Set Limits for Emerging Contaminant GenX

Hi there!

Some constituents in our area are upset by this call from Gov. Cooper to set limits for GenX - while they are still dealing with the fallout of contaminated coal ash drinking water.

Here's a sample of the complaints from a woman in Belmont who has been relying on bottled water for years now "Where is the press release for our water? He used it in the debates to gain our votes but now went silent!!! Typical ... Want your vote but not your problems! We've been fighting for 820 days NOT a few weeks!"

Does the Governor have a response to that?

Thank you in advance,
Caroline

Governor Cooper Urges EPA to Set Limits for Emerging Contaminant GenX

State Has Stopped Chemours' GenX Discharge for Now, But Federal Action Needed for Permanent Solution

RALEIGH: Federal officials must set limits for GenX and other emerging contaminants so that North Carolina can permanently control its discharge and ensure the safety of its drinking water, Governor Roy Cooper today told the U.S Environmental Protection Agency.

In a letter to EPA Administrator E. Scott Pruitt, Gov. Cooper asked the EPA to move more quickly to finalize its health assessment and set a maximum contaminant level for the unregulated chemical GenX.

"When we turn on the tap to get a drink, cook a meal for our family, or run a bath for our children, we count on that water to be safe. North Carolina must have your help to make sure the water is safe for millions of our families," Gov. Cooper wrote in the letter.

At the Governor's direction, the NC Department of Environmental Quality along with the NC Department of Health and Human Services launched an investigation June 14 into the presence of GenX in the Cape Fear River. The river serves as the primary source of drinking water for Bladen, Brunswick, New Hanover and Pender counties.

The Cooper administration and others got Chemours, the chemical's manufacturer, to stop discharging GenX into the Cape Fear. As a result, initial water tests being conducted by DEQ show that levels of GenX in the water supply are down dramatically. State officials continue to collect water samples, with samples being tested at an EPA lab in North Carolina and a private lab in Colorado.

Additional action from the EPA is necessary in order for North Carolina to be able to permanently require Chemours to limit or end discharge of GenX or any currently unregulated chemical. Gov. Cooper is also pushing the EPA to revisit its existing consent order with Chemours to apply to all releases of GenX.

In addition, the letter asks the EPA to use its authority under a federal law that regulates the introduction of new chemicals, the U.S. Toxic Substances Control Act, to examine wastewater emissions more carefully and require multiple health studies for new chemicals.

"The water, health and welfare of the people of North Carolina require your protection now from unregulated emerging contaminants like GenX, and I look forward to working with your agency on this and a variety of water quality issues," Gov. Cooper wrote.

More information about the state's ongoing investigation of GenX is available at <https://deq.nc.gov/news/hot-topics/genx-investigation>.
